

Every dose signed, every time — without the paperwork.

GetHelix replaces paper MAR charts and clunky per-bed systems with one simple platform for care homes, supported living and domiciliary care. Built around the real round: signing, stock, pharmacies and inspection day.

● The daily reality today

- **Paper MARs can't prove what happened** at 2am — gaps found days later.
- **Missed and late doses** surface only when something's already gone wrong.
- **Medication stock and CD counts** never quite reconcile; discrepancies eat manager time.
- **Pharmacy orders by phone and fax** — deliveries arrive with no idea what's inside.
- **Inspection prep means panic** — photocopying MARs and hunting for evidence.
- **Other eMARs charge per bed, per home** — the better you do, the more you pay.

● What GetHelix does instead

- **Guided medication rounds** with barcode pack scanning — right person, right medicine, right time.
- **Works with no signal.** Sign offline on community visits or in signal dead spots; it all syncs later.
- **Everything covered:** MAR, PRN, creams, dosette box counts and controlled drugs, done properly.
- **Warnings before you sign:** interactions, medicines running out, expired packs.
- **Pharmacy built in:** order, track deliveries, scan packs in on arrival, flag shortfalls instantly.
- **Prescription changes go through a manager** before carers can act on them.
- **Client money safeguarded:** receipts, running balances and two-staff cash counts.
- **Care plans, professional contacts and documents** — all in one client profile.
- **Real UK medicines database built in** — every BNF medicine, so nothing is typed from memory.
- **Plays nicely with others:** Nourish, Person Centred Software and Log my Care integrations.

Built for the way each service works

Care homes

Whole-home rounds, communal and self-administered, with full stock and CD control.

Supported living

Person-centred profiles, per-client viewing, consent and homely remedies handled.

Domiciliary care

Offline community rounds, one client at a time, with exact timestamps of every visit.

Different on purpose. Priced fairly.

We're not a hospital system squeezed into a care home, and we're not a per-bed meter running in the background.

What makes us stand out

- **One flat price — £129 a month.** Unlimited homes, unlimited clients, unlimited staff. No per-bed fees, ever.
- **Designed for adult social care** — supported living, extra care and domiciliary, not just residential.
- **Offline-first** where competitors simply stop working without signal.
- **Real pharmacy workflow:** deliveries, shortfalls, barcode book-in and reconciliation — not just a record.
- **Safety intelligence in the workflow** — interaction, expiry and run-out warnings appear exactly when the dose is signed.
- **Straightforward to switch:** import your current medicines and residents in days, with support through a parallel run.
- **UK team** that understands CQC, DSPT and the reality of the round.

For the whole organisation

- **Managers:** prescription changes, pharmacy reviews, money resolutions and audits all in one queue.
- **Carers:** one guided screen per round — nothing extra to fill in.
- **Owners / directors:** multi-site analytics across every home and client, from one login.
- **Auditors:** read-only access that shows everything and changes nothing.
- **Everyone:** roles and permissions mean people see exactly what they should — no more, no less.

Inspection-ready, every day — not the night before

Complete audit trail

Every dose: who gave it, when, where, and every change afterwards.

Missed-dose resolution

Structured reasons and manager review instead of scribbled corrections.

Medication audits & temperatures

Scheduled audits and fridge/room logs with alerts when out of range.

Competency & training blocks

Staff can't sign beyond their training or competency expiry.

Policies, risks, events & actions

Your governance register — evidence inspectors can walk through.

Reports & exports

One-click packs for CQC, commissioners and head office.

Mapped to the CQC key lines of enquiry: **Safe** (audits, warnings, stock, CDs) · **Effective** (training, reviews, PRN) · **Well-led** (governance registers, analytics, secure data with MFA & SSO).

Also in the box — at no extra cost

Flexible schedules (variable doses, dose ranges, set intervals) · **STOMP psychotropic reviews** · **CQC evidence vault** for submissions and documents · **GDPR tools** — data access and erasure requests handled in-app · **Quality scoring** across sites · **Bulk import** of clients and medicines from spreadsheets · **Read-only API** for head-office systems · **Scheduled report exports** straight to your inbox

£129 / month + VAT

or £1,290 a year (two months free). **Unlimited homes, clients and staff.** No per-bed charges. No setup fee. No price rise when you grow.

See it on **your** round in 20 minutes.

Scan to book a demo —
or send this to your manager.

A live dashboard — and security you can prove.

Know exactly what is happening across every home right now, with data protected to the standard the NHS and CQC expect.

Your live dashboard — the whole service on one screen

Today at a glance

Doses given today, PRN given in the last 24 hours and active medications — updating live as carers sign.

Manager action queue

Prescription changes, pharmacy deliveries, money mismatches and audits waiting in one place.

Problems surface first

Missed and late doses, low stock and expiring packs flagged before they become incidents.

Ready for inspection

Jump straight from the dashboard to the evidence, reports and audit trail an inspector asks for.

Every home, one login

Owners and directors compare sites side by side with quality scores and analytics.

No more chasing

Stop ringing round the homes — you see it before anyone has to tell you.

Security built in from day one

- **Two-step verification** with any authenticator app, plus single sign-on with Microsoft, Google Workspace or Okta.
- **Each company completely sealed off** — your data can never be seen by another organisation.
- **Role-based access:** carers, managers, owners and read-only auditors each see only what they should.
- **Tamper-evident audit trail** — every sign-off, edit and login recorded with who, when and what changed.
- **Signing locks:** staff cannot sign beyond their training or competency.

Protecting sensitive records

- **Encrypted in transit and at rest**, with modern browser protections switched on for every page.
- **Private document storage** — care plans, receipts and CQC evidence open only through short-lived secure links.
- **GDPR tools built in:** data access and erasure requests handled and logged in the app.
- **Supports your DSPT** (Data Security and Protection Toolkit) with a built-in standards checklist.
- **Offline data kept safe** on the device and synced securely the moment signal returns.

What this means for you

For inspectors

Clear, secure evidence under Well-led and Safe, whenever they ask.

For commissioners

Confidence your data handling meets NHS and GDPR expectations.

For families

Their loved one's records are private, accurate and protected.
